

Session Topic and Date	Introduction dated 13 <sup>th</sup> and 14 <sup>th</sup> Oct 2018
Assignment Number	1.2
Assignment Submission Date	19 <sup>th</sup> Oct 2018

### Problem Statement

1. How many ways are there to call a function in R?

**ANS** - the simple way in which a function is loaded and executed in R. This might not be visible in the Rstudio console, but it is in any R console.

2. Is the below statement true?

The lazy evaluation of a function means, the argument is evaluated only if it is evaluated only if it is used inside the body of the function. **True**

3. Mention true or false for below statements:

- Insights driven from descriptive analytics is not meaningful. **False**
- The number of values in each Elements of a list, should be equal. **False**
- The datasets are not stored in memory of the computer using R. **False**
- Data frames and matrices are two dimensional however the array is multidimensional. **True**
