

SESSION 2 – INTRODUCTION TO R

ASSIGNMENT 2.1

Date: 21st November 2018

1. What are the different methods to call a function in R?

We can call a function in R in 3 ways. First method is to call by using position of the arguments. Second method is to call by using the name of the arguments and the third method is to call by default arguments.

2. The lazy evaluation of a function means, the argument is evaluated only if it is used inside the body of the function. Say True or False.

TRUE (If there is no reference to the argument in the body of the function then it is simply ignored)

3. State True or False:

a. Insights driven from descriptive analytics is not meaningful. - **FALSE**

b. The number of values in each Elements of a list, should be equal. - **TRUE**

c. The datasets are not stored in memory of the computer using R. - **FALSE**

d. Data frames and matrices are two dimensional however the array is multidimensional - **TRUE**
